Municipal Hospital

A Live Issue

The office of medicine is but to tune this curious harp of a man's body and to reduce it to harmony. From the above it can be readily understood that this can be accomplished much more readily and with greater efficiency in an up to date adequately equipped hospital, than it can in one not possessing these requirements. A municipal hospital possesses all these requisites, being all that is desired in every way. Just take the time to consider what your own requirements would be in the event of your being forced to be taken to a hospital for treatment! Would it not be much more economical for you to have these facilities in your own community and in your own municipal hospital; thus besides being able to save your life, it is more certainly would be the means of saving you considerable time and money, at the same time permitting you to be cared for in your own community where you can be visited daily by your relatives and friends and also be able to keep in touch with your private affairs.

Municipal Hospitals to day are far beyond the experimental stage. They are health restoring institutions, handled like any other business. There is not a single municipal hospital in operation to-day but what is a paying proposition, in fact in some places the profits over some few years of operation have provided enough money, over and above all expenditures, to increase the size of the hospital.

The happiness of men consists of health in life and life in healthy labor.

Preserve this by the establishment of a municipal hospital in your community for the welfare of the community.

Here and There

(50)

Victoria. — The area of forest land in British Columbia estimated to future forest production is 5,800,000 acres, according to a Government report.

Calgary. — Plans are actively under way by the Calgary Terminal Grain Company to build a seven hundred thousand bushel elevator at Vancouver. It is announced by A. B. Betts, manager of the company. Mr. Betts said that an eminently suitable site had been secured on the north shore, approximately opposite Spillers elevator.

Five special trains carrying around 1500 pilgrims, passed through Montreal recently on their way to Quebec City and the shrine of Ste Anne de Beaupre also visiting the shrine of St. Joseph in Montreal on their return trip. They were from the church of St. Alden, Jersey City and under the care of Father Thomas M. Curry, parish priest, were on their annual pilgrimage to these shrines.

Shipments of freight destined to points in the north-west of Canada via Port McNicoll, Ont. on the Canadian Pacific lake and rail route will now be accepted, the earliest date being April 3. There will be five steamers in the company's lake service between Port McNicoll and the head of the Lakes during the coming season. Through passenger service will be resumed this season from Owen Sound May 7 and from Port McNicoll, May 18.

Installation of Mack Tractors and Lapper Trailers for rapid movement of freight from Canadian Pacific depots to and from outlying terminals has now been completed in Montreal and will shortly be in use in Toronto. The tractor is immediately attachable to one or more of these trailers which can hold up to 15,000 lbs of freight and can be as swiftly disconnected. They are expected to immensely expedite the movement of C. P. freight.

Praise For Anti-Toxin Cure

Most Effective in Warding Off Diphtheria Says U.S. Doctor

The number of cases of diphtheria and deaths resulting therefrom have been reduced 90 per cent. in Pennsylvania in the last few years, says Dr. Theodore B. Appel, secretary of health, at Harrisburg. This phenomenal decrease, Dr. Appel said, has been the almost entirely to the use of toxin-antitoxin.

"Nothing has been more definitely proven," Dr. Appel said, "than the power of toxin-antitoxin to ward off that most dreaded childhood disease—diphtheria."

NEW BLOOD NEEDED IN THE SPRING TIME

Try Dr. Williams' Pink Pills As a Blood Improving, Health-Restoring Tonic

Every man, woman and child needs new, rich, red blood at this time of the year. That is a scientific fact. All doctors know it. The blood is the life and power in the winter; there is not enough of it, and spring shows the result. Take note of the fact that many people are pale and sallow at this time of the year. They complain of being easily tired, their appetite is poor, and they feel nervous and low-spirited. That is Mother Nature urging them to improve their blood supply, but often their attention is weakened so that they cannot heed the warning. Here is where modern medical science comes to the rescue. Dr. Williams' Pink Pills have a direct action on the blood and enable you to get full of the blood-making elements in your veins. You soon feel their effect your appetite improves, your nerves are steadier, order returns to the clogged lips, you have more vim and energy, and can work with less fatigue.

The value of Dr. Williams' Pink Pills to all who are in what is known as a run-down condition of health is proven by the following testimonial from O. A. O'Neil, Port Hood, N.S., who says: "It is impossible to tell you how much Dr. Williams' Pink Pills too highly. I had been gradually growing weaker and fainter in health. I was nervous and easily irritated, and almost any condition would set me off. A friend urged me to take Dr. Williams' Pink Pills, and I got a half bottle. I was in luck. I took them a short time when I found them helping me, and by the time I had taken the supply I got, I was again enjoying good health. Headaches and pains disappeared, my nerves were strengthened and I had good energy. I will never again follow the advice of my friend."

Whether you are seriously ill or merely feel easily tired and out-of-control, you should try Dr. Williams' Pink Pills. They are sold by medicine dealers everywhere, or may be sent by mail at \$1.00 a bottle by writing The Dr. Williams' Medicine Co., Brockville, Ont.

Development of the deep blue and blue and white tale which are found in the vicinity of Banff, Alberta, is to be undertaken. The blue variety is to be undertaken. The blue variety is to be undertaken. The blue variety is to be undertaken.

Asthma Cannot Last when the Cause of the Depressure is Removed.

Dr. J. D. Kellogg's Asthma Remedy deserves this estimate. It has been used in thousands of cases which other preparations have failed to benefit. It has been found to even the most severe cases and brings the patient to a condition of health. It has been found to even the most severe cases and brings the patient to a condition of health.

An Oil Without Alcohol—Some of the most valuable ingredients have alcohol as a prominent ingredient. A judicious mingling of six essential oils composed Dr. Thomas' Electric Oil. There is no alcohol in it, so that its effects are lasting.

Working On New Device

Dr. Whitney Thinks Idea For "Talking Books" Practicable

And now talking books, born to the blind, the ill, and those with tired eyes.

Dr. Willis R. Whitney, director of the General Electric's laboratory, is working on such a device and thinks it is practicable. The plan is for a long strip of film to be translated into words by a loud speaker about three times as fast as reading.

Hawyers sold cabbage in the churchyard of St. Paul's three hundred years ago until banished by the clergy because of the noise they made.

There are nine hundred miles of silk fibre in a pound of silk. China's yearly production is 9,000,000 pounds.

AFTER ALL There's Nothing To Equal War

FOR THE SKIN!

Red Cross Celebration

Fifty-Eighth Anniversary Will Celebrate Hundredth Birthday of Founder of Organization

On May 8, 1928, fifty-eight national organizations, headed together under the Red Cross flag, will celebrate the hundredth birthday of Henri Dunant, founder of Red Cross and joint winner of the Nobel Peace prize.

In Toronto, the Ontario Division of the Canadian Red Cross Society will signal home the occasion by giving a banquet on April 29, at 4000, the delegates attending the Annual Meeting of Central Council. A limited number of tickets are being sold outside of the membership, and it is expected that nationally known speakers, including the Lieutenant-Governor of Ontario, will attend and give the celebration speeches. The functions will also be held in every Canadian province.

It is fitting indeed that such a century should not go by unnoticed for Dunant did much to promote the idea that suffering in war, the agony of the battlefield, could be largely mitigated.

It was while this great benefactor of humanity was travelling in Lombardy in 1859, that he witnessed dead, dying, wounded and sick men lying on the battlefield of Solferino, without anyone offering as much as a drink of water to a single soldier. The sight of this so wrung his heart that he did not rest until an impulse came upon him to prepare in the nearby town of Castiglione, with a voluntary ambulance and nursing service in attendance. This he has done for a number of years, and his functions will also be held in every Canadian province.

The sight of so much agony never left his mind and he wrote a brochure that was fraught with much significance. It was the first of a series of books that he wrote, and it was the first of a series of books that he wrote.

From that time the Red Cross has been a part of the world's life. The first Red Cross was formed in the German principality of Württemberg. It was the first of a series of books that he wrote.

Great Britain adopted the Treaty of Geneva on February 18, 1865. Prussia joined June 22, 1865. Russia was linked up on July 9, 1865, and the United States on March 16, 1865.

The Canadian Red Cross Society at first was an offshoot of the British organization, but is now entirely autonomous within the boundaries of the Dominion of Canada. Turkey also subscribes to the same ideals but uses the symbol of the red crescent in place of the Red Cross, Turkey being purely a Mohammedan nation.

Miller's Worm Powders destroy worms without any inconvenience to the child, and so effectively that they pass from the body without being noticed. They thoroughly cleanse the stomach and bowels and leave them in a condition not favorable to worms. There will be no revival of the pests.

More Trackage For Vancouver

C.P.R. Will Install Over 100 Miles Of New Tracks To Meet Growing Demand For Increased Business

Over 100 miles of trackage serving the ports of the Vancouver District will shortly have been built by the Canadian Pacific Railway, according to a statement issued by the general superintendent of the district.

The trackage is designed to take care of a steady and normal growth in trade through Vancouver and also to handle the export of lumber. The movement which in 1926 has reached the record of 53,000,000 bushels.

No one need endure the agony of corns with Holloway's Corn Remedy at hand to remove them.

Results Are Satisfactory

Big New York Store Starts Day With Song Service

Music as a method of "pepping up" and stimulating business has been adopted by Arnold Constable & Co., New York, and, according to the consensus of opinions of the various executives, the results are satisfactory.

Early buyers at this establishment who arrived before the usual hour of opening have been puzzled and rather intrigued by the sounds of melody, the strains of singing choruses, proceeding from behind the closed portals.

The first service occupies the period from 8.30 until the doors open at 9 a.m. Under a competent leader the chorists, made up from every department in the large establishment, enters into this brief song service. The results which has been a noticeable feature of early morning activities has disappeared at the close of the "songfest," all the participants are at their work and the day starts off with a vim and swing that is astonishing.

Returned Soldiers' Insurance Act

26,000 Pensions Are Issued, Representing \$37,000,000

Under the Returned Soldiers' Insurance Act there are 26,000 policies, representing \$37,000,000, today, according to a statement by L. H. Beaumont, assistant deputy minister of soldiers' civil re-establishment, to the special parliamentary committee on pensions and returned soldier problems. He said the cash already collected had amounted to \$260,000, amount that was in excess of debt. The actual loss of operating the act not totaled \$1,000,000, based on the life time of the insured.

2466-2467, 2468-2469, 2470-2471, 2472-2473, 2474-247

Development of Marquis Wheat Considered Most Outstanding Contribution To Agriculture

While the contributions to agriculture from scientists and plant breeders have been many and important in recent years, the development of Marquis Wheat has been by far the most outstanding. Its introduction into Canadian agriculture marked a new epoch in the agricultural and industrial life of Canada, and to some extent in the United States.

Marquis Wheat originated from a cross made in 1892 at the Canadian Government Central Experimental Farm, Ottawa, between an early maturing variety obtained in India under the name of Hard Red Calcutta, and the leading Canadian wheat, Red Fife. It was developed by Dr. Charles Saunders, of Ottawa, who, on his retirement a few years ago, was given an annuity by the Canadian Government of \$5,000 a year in recognition of his great contribution to agriculture. He is still living in the Canadian Capital.

The chief points which distinguish Marquis are its ability to mature from six to ten days earlier than Red Fife; greater strength of straw than the latter variety; its greater resistance to stem rust; and its greater productiveness. It is probably safe to say that no new cereal variety thus far introduced anywhere has excelled in so many points or has taken the place of other varieties over so wide an area. By 1913, only six or

seven years after its introduction, Marquis had taken the lead over all other varieties throughout the wheat-growing areas of the western provinces, which led it increased so rapidly that within ten or twelve years from its introduction it is credited with having occupied not less than 80 per cent. of all the spring wheat in the Dominion. Even in the United States, Marquis is conceded to be the most generally grown spring wheat variety, occupying in that country between 60 and 70 per cent. of the entire spring wheat area.

It must also be remembered that the advent of Marquis has made it possible to grow a high yielding, high quality wheat in many districts in which wheat might not have been attempted, or if attempted would have yielded much less, and, in many cases would have been of lower quality and grade. While, as may naturally be expected, Marquis may have to give way in certain districts to other varieties which prove better adapted to meet the conditions which prevail there, yet at the present time Marquis reigns supreme as a "general" variety. It is also interesting to note that Marquis is a variety of common spring wheat which could not find a place in Western Canada or more closely related to Marquis from which they have inherited some of their better virtues.

THE ROYAL OAK COURT-MARTIAL.

Captain K. G. B. Dewar, centre, and Commander H. M. Daniel, right, officers of H.M.S. Royal Oak, court-martialed in connection with the recent episode on the flagship of the battleship squadron of the Mediterranean fleet. The charges against them were laid under a limited provision of the Naval Discipline Act, and concern a letter, deemed subversive of discipline, sent by Daniel to Dewar and forwarded by him to Vice-Admiral Kelly. This letter was said to have contained a reference to the fact that the Royal Oak, on the left, was as a result of the commotion on the Royal Oak "struck" his flag and proceeded to England.

Larger Acreage Shown

Increase in Land Ready For 1928

Western Crop
Acreage prepared for the 1928 crop in the Prairie Provinces is estimated at 16,290,570 acres, as compared with 15,745,852 acres in 1927, an increase for the present year of 544,718 acres, or 3.5 per cent. Manitoba shows an increase of 536,774 acres, 17.4 per cent.; Saskatchewan, an increase of 1,003,465, or 12.5 per cent., and Alberta, a decrease of 621,231, or 14.5 per cent. There is an increase in new breakings in all provinces, with the exception of Manitoba; all provinces record an increase in fallow, while Alberta records a decrease in fall plowing.

Candidate Included in List

The name of one Canadian is included in the list of official judges appointed by the Holstein-Friesian Association of the United States for 1928. It is that of R. M. Holby, Ontario, Chief Fieldman of the Canadian Holstein-Friesian Association. He is the only one from the Dominion to be included in the list.

Construction of a combination paper mill and box factory, the ultimate cost of which will be \$1,000,000, will commence in Winnipeg some time this year.

"You swore to your wife that you would never come home drunk at night again."

"That's right. I am not going home with the morning."

Charlot.

SAYS WAR IS A DISEASE

Dr. Henry Van Dyke Points Out
Three Cures For Age
Ailment

"War is one of the diseases for which man is earnestly seeking a cure," says the Rev. Dr. Henry Van Dyke, of Princeton, N.J., formerly United States Minister to the Netherlands.

Dr. van Dyke set forth three cures since the first cause of war lies in the human heart—original sin, passion unrestrained, selfishness unbridled. The first element of cure is preventive hygiene of mind, heart, education, religion, philosophy, etc. All—God over all—world-wise.

"The second element of cure for war is a reduction of competitive armaments. They are supposed to be the protection of peace, but 1914 proved that they are temptations to war."

"The third element in the cure of war is the provision and use of peaceful means of settling disputes between nations. The two old means were diplomacy and conference. They often proved useful, but they sometimes failed. The two new means are the League of Nations and the World Court."

"It is astounding, incredible, that America has stood aloof, proudly disdainful or grossly ignorant of these two vital substitutes for the lethal instruments."

"The day when America enters the League and adheres to the Court will be a good day for her and for the peace of the world."

Cash On Delivery

Afghan Royalty Could Not Get Credit

At London Shops
The London shopkeepers alternatively are congratulating and commiserating themselves over the fact that the Afghan majesties, King Amanullah and his Queen, visited Berlin and Paris before coming to London. The shopkeepers were looking forward to sharing the fabulous wealth of the East, and at first were disposed to be perved because the French and German merchants had first crack at the Oriental purses. Now they have discovered that the purses are empty and their credit, they are rather glad, on the whole, that they escaped.

When the first orders were placed, the Bond Street shopkeepers made the usual perfunctory inquiries about their credit, but delivered the goods. Then came a report by one of the henchmen that the Afghans had bought many thousands of dollars worth of goods in Berlin and Paris, but had not paid a penny.

The Berliners and Parisians were debarred by international courtesy from suing, and now are grinning and making the best of a bad business. Bond Street, however, drew in its horns immediately, and refused delivery except for cash.

British Boy Immigrants

The demand in Manitoba for British boy immigrants licks foot to exceed the supply. Between 160 and 170 immigrants are being recruited by the farmers have notified the Ministry of Agriculture, that they are prepared to place the boys on their farms, but it is doubtful whether that number will be available.

Canada's national parks in the Rocky mountains are nearly as large as Belgium and two-thirds as large as Switzerland.

THE AMIR OF AFGHANISTAN

The Amir of Afghanistan, photographed on his arrival in London, with His Majesty King George, who welcomed him at the Metropole. The visiting monarch received a wonderful reception wherever he went in England.

INTERESTING FACTS

ABOUT SIBERIA

Cold Never Ends and Ground
Frees Solid Thirty Feet
Down

Speaking at the University of Toronto on "The Ethnological Background of Asiatic History," Hillierman Winkle gave some interesting facts about Siberia.

Prosy Siberia, as described by travellers in the northern regions, sounded anything but attractive, yet the people have so far habituated themselves to the never-ending cold that reports tell of children playing naked in the snow, and men, clad only in shirt and sheepskin, lounging smoking in doorways, while the mercury freezes in the bulb of the thermometer.

For a distance down of one hundred yards or more the earth is frozen solid. Occasionally a red hot stove in one of the houses melts the frozen ground to a depth, with the result that water gushes up like an artesian well and the houses congeals almost immediately into a solid block of ice, while the inmates flee for their lives.

Burial in the frozen earth is impossible, so the dead man is placed in a small wooden casket, set on the surface of the ground, together with his best sheep, the horns of his favorite reindeer, killed purposely to keep him company in the next world, and his driving whip. Small bells are hung above the grave and their tinkling is supposed to drive away evil spirits. Practically all the tribes of Northern Siberia are nomadic in character and among them is the custom to club the old people of the tribe to death, a purely family affair, accomplished with no hard feeling on either side.

Immediately south, in the steppes, the country is much like Northern Ontario, with rocky hills, pine trees and other birches. Here, after an early spring, occur "The Ice Saints' Days," when a bitter cold wind sets in for a week or so, and prevents the growing of even the most hardy orchard fruits.

Valuable Asset To Farm

Good Windbreak Useful and Adds Greatly To Appearance

A windbreak is a valuable asset to any farm. Livestock will winter better behind a good windbreak and less fuel will be needed in heating the farm home. Drifting snow is also kept back from the yards and buildings if they are protected by a good windbreak.

The well-grown windbreak also provides a real fuel supply. The farm on which there are plenty of trees also makes a more pleasant home than the barren farmstead.

Should Be Good

A gentleman who was in the habit of giving lectures always had a long glass of cold milk on the table so as to have a sip now and then.

On one occasion he was suddenly engaged to put whisky into the glass of milk before it was put on the table. The temperance lecturer took a sip now and then, until at the conclusion of his lecture he held up the tumbler and when it was emptied, looked at it and said "Good cow."

A seotman rang up a doctor in a state of great agitation.

"Come at once," he said, "me wee bairn has swallowed a sarpence."

"How old is he?"

"1894."

Four Western Provinces Take The Leading Place In Per Capita Wealth of Canada

The total of the tangible wealth of Canada is estimated at \$20,073,174,000, according to a survey made by the Canadian Government Bureau of Statistics for the year 1925, which is equal to \$2,772 per head of population. This total does not include unexplored natural resources. There was an increase of \$3,000,000,000 in Canada's tangible wealth in four years, as a comparison with the survey made in 1921 discloses.

In the distribution of wealth by provinces, Ontario ranks first, with estimated aggregate wealth of \$5,000,727,000, or 35.1 per cent. of the total; Quebec second, \$4,228,284,000, or 24.5 per cent. of the whole; Sas-

katchewan third, with \$2,870,514,000, or 14.3 per cent. of the total for the Dominion.

While Ontario led in absolute wealth, the western provinces came first in per capita wealth; Saskatchewan held first rank with a per capita wealth of \$2,844, British Columbia second, with \$2,539; Alberta third, with \$2,459, and Manitoba, fourth, with \$2,409. These figures may be compared with \$2,601 and \$2,495, the per capita wealth of Ontario and Quebec respectively.

The total agricultural wealth is placed at \$7,822,942,000, the largest item in the national wealth, and 39.51 per cent. of the whole.

TYPEWRITING COMPETITION

Three winners in the seventh annual typewriting championship conducted in Toronto are seen above. No. 1 is Miss Marchessault, of Vancouver, one of the senior winners. No. 2 is Irene Wright, Canadian champion, who successfully defended her title with 111 words a minute. No. 3 is Elsie Keniston, of Brockville, first in the intermediate class.

WHEAT VARIETIES BY CROSS BREEDING

Much Labor Involved In Developing An Earlier Maturing Wheat

In order to obtain an earlier maturing variety of wheat many factors had to be considered. Extensive collection was made and experiments were carried on at the Canadian Government Experimental Farm at Ottawa. The variety found to be most favorable to cross with Red Fife was Ladoga, named after the region in Russia from which it came. Two varieties were developed from cross breeding and gave rise to the names of *Golden Wonder* and *White Fife*, a white-kernelled variety similar in all other respects to Red Fife, yielded a number of forms, one of which received the names Huron and Percy. The former is now considered the most promising variety for most parts of Eastern Canada, wherever people are not too particular about the matter of bread-making qualities.

Another interesting variety bearing the name Early Fife resulted from this early crossing work. This came from a cross between two imported varieties. One of these called Omega, came from the Himalayan mountains of East India, from an elevation of about 11,000 feet. The other called Omega, was brought from near Archangel, Northern Russia. Early Fife proved to be one of the earliest ripening wheats grown. It possessed very fair baking quality but was less productive than Red Fife.

Canadian Postal System

The Canadian Post Office Department delivers over 600,000,000 letters, 350,000,000 newspapers, 400,000,000 circulars, and 400,000,000 parcels annually in Canada. This delivery is made through about 12,440 post offices and over 200,000 rural mail boxes extending over an area of nearly 2,700,000 square miles.

The last of the British-owned four-masted sailing ships, the *Clashpaw*, was built in 1891.

"Do you really fish at night?"

"Yes. With glow-worms for bait."

—Rita Hunter, Madrid.

Spring Care In Marketing Eggs

How Should He Taken In Keeping Nests and Poultry Yards Clean

Why is it that farmers who give the utmost care to their milk, to cook it and keep it clean, who carefully sort the potatoes they send to market, persist in selling dirty eggs? The question is one which puzzles those interested in the egg trade—men who know the depressing effect these dirty eggs have on the market. Farmers will sort their potatoes because they know that consumers do not want a small, scabby, ill-appearing product. They will keep their milk clean because they know that nothing will turn consumers against milk more than dirt. The same consumer preference is exerted in eggs, as is indicated by the success of standard egg grading, but all farmers do not seem to have realized the necessity of producing and marketing clean eggs.

A very interesting commentary on this matter was provided recently by Mr. E. J. Smith, manager of the Whyte Packing Company, of Brockville, Ontario, who stated that dirty eggs, and their related evil, washed eggs, represented one of the greatest problems and biggest sources of loss in the egg trade, a loss which eventually the producer has to bear.

"Dirty eggs," said Mr. Smith, "are repulsive to the consumer and lessen the demand for all eggs. Washed eggs deteriorate quickly and, if stored, usually command a lower price, and unit for unit, it would be a decided advantage to producers if they would give a little care to keeping clean, poultry houses and yards clean and we are confident that a little attention to sanitary conditions would result in much better prices. It would also add much to the attractiveness and pleasure of doing business."

Mr. H. R. Gray, Managing Director of Gunn, Langlois & Company, Limited, Montreal, and president of the Montreal Poultry Merchants Association, in a recent interview gave a little further and explains why nature covering on the egg should not be removed.

"Dirty eggs," said Mr. Gray, "should never be washed if they are to be sold and marketed through regular channels. Washing actually removes the natural defense on the shell and serves the purpose of filling the pores of the shell without sealing them, thereby any air that may pass through the shell itself with its two lower membranes forms the protective wall of the egg and by washing the egg will remove the protection coating on the shell which serves as a protection for the contents. When this coating is removed the eggs have a tendency to deteriorate faster, especially if they are placed in storage."

"Cleanliness of shell affects the quality of the egg directly, but if the egg is clean it will hold up better in storage than a dirty or stained egg. Cleanliness affects the price also. The Canadian Egg Standards require that Fresh Extras be clean and Fresh Primos reasonably clean, so that if producers market dirty or stained eggs they must be sold either as seconds or in the class of cracked and dirty eggs."

If eggs are going to reach the market in good condition the first step must be taken by the farmer in proper care of handling. A poor quality egg will always remain an inferior product. The fundamental thought in handling eggs should be to preserve the original quality of the eggs. Good care on the farm is essential as a step in marketing good eggs."

Mr. Gray summed up his interview by stating that his firm is absolutely opposed to handling any washed eggs.

"A sensible man doubts everything. Only a fool is certain of what he says."

"Are you certain that?"
"Positive!"—Elin Humer, Madrid.

Making Migration Easy

Lighthouses Among British Isles Have Perches and Feed Boxes For Birds

The Royal Society for Protection of Birds has become a sort of tourist agency for the bird world.

As the time for Spring migration approaches, the society has taken steps to aid the little travelers. Large perches have been erected around the tops of various lighthouses which are on the bird favorite flying route around the British Isles. The bright houses of the lighthouses are responsible for the death of tens of thousands of birds annually. Often being tired by their long flights, the birds, flying at night, are attracted like moths to a candle by the brilliant light. Finding no refuge, the device is numerous instances, by round and round until exhausted and finally drop into the sea.

The same means now point the way to a haven for the birds. The perches are of wood on iron supports, being arranged in rows round the dome and the base of the lamp. Feed boxes are provided.

Immigration To Canada

Population Of Dominion Is Increased By 136,392 Through Immigration Last Year

Immigration to Canada for the eleven months of the fiscal year ended February 28th, totalled 136,392 according to a recent statement issued by the Department of Immigration and Colonization. This compares with 123,720 for the same period last year, an increase of 12 per cent.

Immigration for February was 4,212, of which 1,002 were British, 1,454 from the United States, and 1,856 from other countries, including 610 from France, Belgium, the Scandinavian countries, Holland, Germany and Switzerland.

During February 1,812 Canadians who had gone to the United States to receive returned to Canada declaring their intention of remaining permanently in this country. The number of such returning Canadians for the eleven months of the fiscal year is 21,217.

Setting a Precedent

A travelling salesman, Fred Pith, having taken a junction, went into the waiting room, pulled out his pipe, and settled to read a paper. In stride, an official, who said: "You can smoke here."

"Why?" asked the traveller.
"You must obey the regulations," was the reply, pointing to a notice, "No smoking allowed."

"One can't obey all the regulations," grumbled the traveller. "Look at that one—'Wear So-and-So Coats.'"

Manager of hotel (to new book-keeper, who is very slow): "Now, then, my lad, it's taking you a long time to black these boots, isn't it?"
Book-keeper: "Yes, sir, some of them were known when I started."

Farm and Garden Fertilizers

Plant Food Materials Now Occupy Important Place In Commerce

Fertilizers are not the doubtful product they were a generation or longer ago, nor are they limited to a few brands and descriptions. Plant food materials and mixtures occupy a considerable place in commerce and industry, and their production involves heavy investment of capital and occupation. In all Canada more than sixty firms are turning out fertilizers of simple or complex form involving almost three hundred analyses each year. They are sold in certain standard materials including sulphate of ammonia and superphosphate, have all to be registered with the Dominion Seed Commissioner, whose branch of the Department of Agriculture administers the Fertilizer Act. The analyses cover many brands of commercial fertilizers are inspected and analysed to see that the buying public are not imposed upon, or defrauded when the fertilizer is purchased subject to percentage of nitrogen, phosphoric acid and potash, the three essential plant foods. The results of these analyses are each year published for the information of those who are interested.

The analyses carried out during the fiscal year 1926-27 are reported in pamphlet No. 86, distributed by the Publications Branch of the Department at Ottawa. These analyses cover 183 complete mixed fertilizers, 82 fertilizers containing only two plant foods, and 14 containing only one of the three recognized essential plant foods. In the entire year's work but twenty-one brands were found by analysis to fall below the guaranteed analysis of the trade. It was found necessary to conduct five prosecutions and to issue warnings for several minor offences. Incorrect labeling was the principal offence, but failure to meet the guaranteed analysis was also found. The results of analyses of samples of fertilizers taken by inspectors during the preceding year, regarding the increasing use of fertilizers in Canada, as indicated by an estimated increase of 20,000 tons over the previous year, bringing the amount up to about 180,000 tons used for commercial purposes.

Duke Of York's Bargain

The Duke of York has taken out a life insurance policy for himself at the extravagant premium of one penny a week, and as a result his heirs at his death will benefit to the extent of about \$25. He was visiting the head office in London of the Prudential Insurance Company and when the opportunity was explained to him he seized it. Unfortunately for him, he thought the premium was a penny a year.

EXTENDING THE POONY BLOOMING SEASON

Early Varieties May Extend Season For A Considerable Time

Of all the perennial flowers the poony is perhaps the most gorgeous and the most generally grown in Canada. The shortness of its blooming season has been charged against it but by a careful selection of varieties the season may be extended to a considerable length. Both in whites and pinks there are both early and late sorts and there is some variation in the color also. The blooming dates of different varieties grown at the Kenilworth, Nova Scotia, Experimental Station, were recorded by the Superintendent, Mr. W. Sixty Blair. These are published in his report for 1926. In the white varieties there are almost two weeks between the dates of the earliest and the latest coming into bloom. Festiva Maxim, one of the best varieties yet produced and fortunately one of the cheapest, opened its first buds on July 1st. Two days later Duchesse de Nemours commenced to break open. A week later Marie Lemoine was showing fine color and on the 13th of the month the first buds of the pink varieties were in bloom. Of the pink varieties the earliest to open was Edulis Superba, on July 4th. The following day, Rosa broke from the last. This was followed the next day by Triomphe d'Elbe and Rosa de Lille, and on the 11th the first buds of the blue and blue-pink varieties. The first buds of Rosa Superba commenced to show their beautiful color. Livingstone, one of the deep blue varieties broke bud on the 11th. But two varieties of the red are reported upon. Henri Deshay broke bud on July 4th and the first buds of the standby, Felix Croese, three days later.

Stresses Need Of Culture

Preferred In Business To Technical Training Says Toronto Man

Technically-trained men are not preferred in business to men who have received cultural training, according to C. L. Burton, president of the Toronto Board of Trade, in a paper read at a gathering there. "Few things are more needed in business than men who have received the best cultural, i.e., classical, education," Mr. Burton said. Modern methods have left very few basic industries. As to the necessary qualifications for a man to become a successful businessman he stressed moral dependability and ability to give service to the consumer.

Money For Experimental Farm Work

The Canadian Parliament recently voted \$1,500,000 for the maintenance and extension of the work carried on by the 24 Experimental Farms in Canada under the administration of the Canadian Federal Department of Agriculture. The money voted is for the next fiscal year. Twelve of the experimental farms are located in the five provinces east of Winnipeg and 12 in the four western provinces.

SUBSTITUTE FOR ANTI-TOXINS

Curative Power Of Dye Stuffs Being Tested By London Doctors

Dye stuffs which are at present used solely to produce colors, may have curative power. This has been proved in the last few weeks, as a result of experiments being carried out at King's College and Guy's Hospital, London. Professor Sir William Williams and others. It is hoped that the dyes may eventually become a substitute for anti-toxins in the treatment of disease.

Anti-toxins are often objected to on the ground that they sometimes have nasty after-effects, and there are, as is well known, a large number of people who object to alien proteins being introduced into their systems.

Certain dyestuffs are known to have antiseptic effects on living matter and, with a view to discovering whether these effects are selective and subject to control, animals were injected with various dyes, and then given a dose of what are known as leuco dyes. A considerable proportion of the animals recovered, whereas those in which the cure was not applied died. It was established that the most effective treatment for leishmaniasis was the compound known as leuco-bright green. The work is as yet far from complete, but it is certain that the dyes have power to neutralize disease, and those whose efficiency has been tested will be experimentally demonstrated to be the most effective "contra-toxins" to distinguish them from "anti-toxins."

New Smuggling Problem

Airplanes Are Proving Source Of Trouble For Customs Authorities

Smuggling by air is a problem which a few years ago would never have entered the heads of the customs authorities, but it is now a fact with it as a reality. On the one hand it shows that there must be great profits in smuggling goods and liquor to the north of the border, and on the other hand, it indicates that the customs authorities of both Canada and the United States have to deal with determined and well-equipped smugglers.

The new customs regulations have eliminated, to a large extent, smuggling by motor truck and car, but the menace of the airplane in the time may yet come when a fleet of customs aeroplanes will have to be maintained to deal with the question. This shows the constant necessity for following the progress of science, not only in bettering the conditions of life for the human race, but also for dealing with those who willfully break the laws.

Idea Did Not Work

Man In Germany Claimed Red For Air Above House

Red for the air above his house, the Luthans plans fly on their service route was asked by Samuel Schwartz, a hake in Zeiden, Germany.

The daily flight of planes above his house inspired Schwartz to seek means of turning the traffic into a personal profit. He unearthed a mucky paragraph of the German real estate law reading: "The rights of a property owner extend to the space above and the ground beneath his property." On the strength of this Schwartz wrote the Luthans demanding settlement.

The Luthans called the claimants attention to paragraph 4 of the air traffic law nullifying "planes and airships to a free passage through the air in so far as they conform with the existing air traffic regulations."

Making Sure Of Duties

A lady had advertised for a maid and was showing an applicant for the place over the house.

"You had been very liberal in your promises of privileges and it looked as though the two were about to come to some agreement, when suddenly the girl asked:

"Do you do your own stretching?"

"Do we do what?" asked the puzzled maid.

"Stretching," repeated the girl.

"You put all the food on the table at dinner and stretch for it, or must I pass it around."

Big Ben Wakes Ontario Baby

"I would like to tell you how well we received the famous Big Ben London, England," writes S. A. Bridge, a radio enthusiast of Wilberforce, Ontario. "We had a very noisy night and it was here up to him that is pretty good when Big Ben in London, England, wakes up a baby in Wilberforce, Ont., Canada."

Germany's Long Range Gun

Secret Of "Big Bertha" Only Clever Job Of Gun Building

The mystery of the "Big Bertha" which struck terror into the hearts of the Allies, has been revealed by the Army Bureau of Ordnance.

It is the chief of the World War historians have spoken of the long-range gun which shelled Paris as the "great mystery of the war." Only a few American Army officers have seen the secret—after all, it was only a clever job of gun building.

Of the files of the Bureau of Ordnance is a complete description of the big gun, its properties, its equipment, all of which are accompanied by pictures. A few years ago a former German artillery officer offered to sell to the War Department a blueprint of the "Big Bertha." The project was rejected, for they could not afford to pay his price and they didn't need to, because all details of the gun are available for use if needed.

The "Big Bertha" was a master cannon, bigger, longer and more powerful than any other gun ever likely to be built again. Its main features, as disclosed by the Ordnance Bureau, were as follows:

1. The master gun was built for the shelling of Paris only.
2. It was reconstructed from worn parts of other naval cannons.
3. It was built after for 827 inch shells and, after being worn, was reworked for 9.45 inch shells.
4. It was built in two sections, the main section 98.5 feet long and the forward section 19.7 feet.
5. The gun weighed 218,000 pounds.
6. The shell left the muzzle at a velocity of nearly a mile a second.
7. The projectiles weighed 24,000 pounds each and were approximately six and one-half feet long, including the fuse caps.
8. The maximum range was seventy-six miles—more than twice as far as the most powerful gun of today—and the projectile had to rise at an altitude of twenty-four miles to cover its maximum distance.

Some such guns were built during the course of the war. Three were being built at the time of the Armistice. American ordnance officers inspected them at an Austria gun factory.

According to War Department information, the guns were transported in two sections on a specially constructed railway mount. A special train of 130 flatcars (from March 23 to April 1), a total of 254 persons were killed, and 620 wounded.

The Allied troops never captured a "Big Bertha." Information from the War Department indicated they were destroyed by their gun crews as the Allied soldiers pushed toward Berlin.

Asking The Impossible

"Dey ain't no justice no mo'!" mourned Hattie to a friend, "Man, I've a sick man. Guess I've gwine ter die, shuah. Ah goes to de doctah, an' he says meah meah meah too close. He says I got very close veins, and do any help for me, he says, am ter eat chicken brot free times a day, an' stay in nights, and Sam, dat just natcherly can't be dem."

Britain Orders Wheel By Phone

A cargo of wheat was sold on March 26th by the Sales Manager of the Canadian Wheat Pool at Winnipeg to a buyer in London, England, over the commercial wireless telephone. This was the first time that the telephone had been used to do big business between Winnipeg and the British Capital.

NEW STATION SIGNIFIES PROGRESS

Significant of the development of the Canadian Northwest is the new station building of the Canadian National Railway, which has just been opened at Edmonton, Alberta. The key was turned by His Honor Mr. William Egbert, Lieutenant-Governor of the province and the station was declared open by Mr. S. J. Hungerford, Vice-President of the National system. Twenty-three years ago the first train entered Edmonton. No less than forty trains go in and out of the new station daily.

CHAPTER XXII.—Continued.

Dr. Symond felt very stern about all this as he stood looking at Helmi.

"Where is your husband on this?" Helmi's tone implied that he suspected

fool play. She had probably murdered him and concealed the body. Dr. Symond's manner warned Helmi that

it would be better for her to tell the truth. Housed from her dream, she

"You must answer me," said the doctor, sternly. His manner was patient but firm.

Helmi did not know where to begin. How could she tell this man her fears?

Maggie Corbett came to the rescue. "She has not the least English, Doctor, but I make out her man joined

up early in the war and she got afraid and came in. It is all right, Doctor, she's married, safe and sound; she has the ring on her finger

and has a value full of nice things for the little one, and she's not a charity case, Doctor, at all. She has money to pay her way."

"The doctor grew more cheerful. "That is fine, Mrs. Corbett," he said. "You see, I got so many cases where

these foreign girls think they are good cooks, some teller where there is paper which he says is a license, and

away they go with him. They have great respect for a paper, especially if it has a red seal on it. But all

everything will do—no tax notice or a water bill—even an unpaid one. Dr. Symond was quite cheerful now.

Then he grew more serious. "I tell you, Mrs. Corbett, it is disgusting how easy these girls are."

"Sure enough," said Mrs. Corbett, "easy is right. Ain't nature wonderful, doctor? Don't it beat all how the

puke it over on us?"

"I tell you, Mrs. Corbett," went on the doctor, not wishing to discuss this angle of it. "If the women of this city who meet in their local

councils and women's institutes and a lot of these other organizations

they are spending so much time on, would make it their business to get

in touch with every foreign girl and warn her of these things—well, I

wouldn't have so much to do; neither would the Superintendent of the

Children—and there would not be so much confusion at the Children's

Shelter."

"You are right again, Doctor," said Mrs. Corbett, smiling. "And it did

ever strike you that that might be good work for the City Club or the

Kiwianahs and such like to say a word to the men? They're doing these

little ones, but maybe if they worked a little harder on the men they would

have less need for Houses. But I see

Motherhood!

Peterboro, Ont.—Dr. Pierce's Favorite Prescription was very laudably

used. I had become all run down, tired, weak and miserable, had no appetite and my nerves were all upset. I saw the 'Prescription' advertised, and

being led to purchase it, I decided to try it. It built me up, gave me an appetite and I got along like the

findings of the day. I am now as well as my own work. I had completely lost my sleep, and my nerves were all upset. I saw the 'Prescription' advertised, and

being led to purchase it, I decided to try it. It built me up, gave me an appetite and I got along like the

findings of the day. I am now as well as my own work. I had completely lost my sleep, and my nerves were all upset. I saw the 'Prescription' advertised, and

what you mean, Doctor and I know it's a grand thing to always be able to lay all the blame on the women. You see the Lord lets her bear all the pain, and we see to it that she gets all the shame; no why not let the rest of the women bear the blame—there's no use spreading it any further."

"You misunderstood me, Mrs. Corbett," said the doctor, quickly. "I have the utmost sympathy for these unfortunate girls, and that is why I would like the women to do something. Indeed, I spoke to the Local Council about it when they asked me to address them."

"That was fine and good of you, Doctor," Commended Mrs. Corbett. "I'm a good natured girl's advice, too. Don't it make a person feel grand to give out a good job of advice; and then if anyone does so the devil we can't say I warned you, anyway—you can't say I didn't. But take the tip I gave you now, Doctor, get busy on the men. Leave the women to women. It's the women who ask for women's advice."

"The doctor interposed: "Now, Mrs. Corbett, I cannot agree with you on there. You must have noticed that women are very hard on women." He was pulling on his gloves now, rubbing and the wrinkles carefully.

"No," Helmi noticed it, but I've heard it—I've heard a lot of men say it."

"Mrs. Corbett, I see you are a great cynic, and I would not have thought that of you," Dr. Symond said laughingly, as he shook hands with her.

"Don't let me keep you, Doctor," she replied, "and it Christmas and all."

When he was gone Helmi opened her eyes. "I can speak English," she said, lifting her head from the pillow. "I heard her say that. Did you give me the ring to wear?"

"Just so," said Mrs. Corbett, "and it's glad that you can speak so well. Swede girl, are you?"

"No, Finn," said Helmi, "two years in Canada. Do you know anything about her? You said my man had mixed up—do you know anything about him?"

"Not a word, but you'll tell me when you feel like it," said Mrs. Corbett, encouraging her friend gratefully.

"You were good to me just now for so many things for me just now, on my hand. I could not tell him when he asked me—he made me want to

"Sure Mike, I know, he's a good little man in his own way, but it's none of his business. He may be sure no woman goes knocking round the country without her man at a time like this for the fun of it. Oh, well, you don't need to answer to him or anyone for that matter, but only to God Himself."

"God don't care," said Helmi bitterly. "I pray and pray but God never hears!"

"Save us all!" cried Mrs. Corbett. "That's the way to talk about God, who is more anxious to do right by us than we are to let Him."

"Are you a Christian?" asked Helmi.

"My gracious, how do you think I could ever run a Rooming House if I wasn't and keep from committing' murder. If the boys of the Ladies' beeh should abscond in my heart why do you think I would butt in and tell lies for you?"

"To let always wrong to tell lies, even kind, good lies like yours? Will God be mad with you for telling a lie for me?" Helmi was afraid her good friend might get into serious difficulties over her.

Mrs. Corbett threw out her hands and laughed. "No fear! God ain't as touchy as a lot of people try to make out. It isn't as if I lied to be mean or to hurt someone, and I tell you how I've got it mixed up. It's a sort of treat for Him to hear someone lie for a woman instead of to her, or about her if you can get what I mean."

Helmi nodded.

"Don't be taking now, for tomorrow is the third day, and there's the time for the fever, if it is coming! all those is bringing your hot milk, and Mrs. Corbett had her supper

cooking on her stove, and I must be running now to see how the bee

lamb is. She's done nothing but sleep yet, and that's the best thing she can do with the long road of life ahead of her."

CHAPTER XXIII.

Helmi settled in on Number 18, taking her meals with the Corbets, and trying to pay for their kindness

by doing the housework, and making clothes for Helmi and Danny, who had become the baby's devoted attendants. Mrs. Corbett was

glad of encouragement when she heard Helmi's whole story.

"Your man has been delayed, that's all. Sure he'll come—never say die, Helmi, dear—and just think of how

Aluminum serves mankind in many ways—one of them being as a container for fine teas. All Red Rose Tea is put up in a clear lightweight aluminum, thus insuring its coming to your table as fresh and flavorful as the day it was packed.

pleased he will be to find this fine little girl, the very picture of himself, with her lovely dark eyes, and must be the spittin' image of him, for she's not a bit like you. But looks don't matter so long as you are healthy, and a better child I never saw."

Encouraged by Mrs. Corbett's confidence, Helmi, as soon as she was able, began to go to the station on the two nights of the week the Peace River train came in, sitting huddled on a seat that commanded a view of the big meadow.

Although due to arrive at four in the afternoon, it was often past midnight before the train drew in.

The station agent began to notice the pale girl with the big eyes who came each train night and who seemed so anxious.

One night an iron gray old man was met by his iron gray old wife, who looked so much like she might have been his sister. Helmi watched them, noting their

ferreted, their light steps as they walked happily away arm in arm, both talking. Helmi saw it all, and somehow it comforted her to know that some had found happiness in life, even if it had apparently passed her by.

(To Be Continued.)

Recipes For This Week

(By Betty Barclay)

WAFFLES

- 1 cup milk.
- 1½ cups flour.
- 1½ teaspoon salt.
- 3 teaspoons baking powder.
- 2 eggs.
- 3 tablespoons melted butter.
- Mix and sift dry ingredients, add milk and eggs, beat well, add melted butter and beaten, butter and whites of eggs beaten stiff. Cook on a greased hot waffle iron. Serve with syrup.

CROUTONS FOR SOUP

- Cut slices of stale bread thinly spread with butter in 1-3 inch strips, removing crusts. Cut each strip in one-third-inch cubes, put in pan and bake until delicately browned.

HOT-SPICED LEMONADE

- 4 lemons.
- 1 quart boiling water.
- 1 teaspoon whole cloves.
- 1 cup sugar.
- 6 cherries cut in small pieces.
- 1 tablespoon minced crystallized ginger.

Extract juice from 3 lemons; cut remaining lemon into slices, pour boiling water over sliced lemon and add remaining ingredients.

PHENOMENAL GROWTH OF ENGLISH LANGUAGE

Appendix To Oxford Dictionary Needed To Accommodate New Words

The English language expands so fast that philologists cannot keep up with it.

This phenomenal growth is indicated in the work upon the New Oxford English dictionary which was begun seventy years ago in an attempt to produce a completely modern etymological record. But so rapid has been the expansion that the new volume will not contain many of the words in current usage unless they will be included later in a special appendix.

Many of the philologists who started upon this colossal work almost have died, and their task has been taken up by other scholars. Dr. C. T. Onions, the present editor, has personally supervised the compiling of the letters S, W, X, Y, and Z.

"Although this is perhaps the largest dictionary in the world," he declared in an interview, "there are many discrepancies caused by changes of language. For instance, the word 'airplane' is now spelled 'aeroplane' because the section A appeared before the word was ever heard of. Similarly, 'airplane', 'tank', 'jeep', 'victrola' and many such modern words have been omitted. We hope to include them in an appendix.

"Even cross-words, which has caused such a tremendous boom in the sale of dictionaries, is not included."

Indicating that the new work is extremely intellectual, Dr. Onions continued: "It is interesting to compare an old dictionary of the eighteenth century with the Oxford dictionary. The old one defines horse as simply a beast. Whereas our definition is: 'A solid hooved perissodactyl quadruped (equus caballus)'."

His Famous Library

King Has Wonderful Collection of Books at Windsor Castle

King George, of England, is very fond of reading and is an authority on naval history. His personal collection of books at Buckingham Palace numbers about 3,000. Among these are first editions of the works of Emerson, Longfellow, and Oliver Wendell Holmes. He also possesses a large library at Sandringham, containing 15,000 books, and also the famous library at Windsor Castle, one of the largest in Europe, containing more than 170,000 books, as well as a large number of valuable prints and MSS.

"And J. Hark McNeulle is a tight one, say you?"

"Tight? That fellow wouldn't give a beggar a bite if he owned the Sandwich Islands."

If men are always judged by their company it's pretty tough on some men who are always alone.

WHY CARE FOR THE BABY TEETH

Of course, as we said, they will be lost eventually then why bother to care for them?

First, there is the inevitable decay, as a result of neglect, with its attendant tooth-ache, and it may be that because of this destruction and pain, the tooth is lost prematurely through extraction and as a sequence, the little jaw does not develop at this point as it would have done with the tooth left in place.

Second, there is this other danger, that the too early and meddlesome extraction of the temporary molars, there is the grave possibility of bringing away or otherwise destroying the developing blood, which frequently causes the spreading roots of the former tooth.

Third, there is the reverse condition where the temporary tooth is retained too long because of interference, through pulp disease, with the natural process of shedding, thus causing the succeeding tooth to erupt out of place or not at all, either of which is bad.

From any or all of these causes, little Sonny is going to have some crooked teeth in his second set, and a malformed jaw, which means a facial deformity of greater or less degree.

Fourth, it is further true that neglect of these "baby teeth" may bring about more serious results than equal neglect of their successors, since decay will make much more rapid progress in them than in the larger and better developed teeth of the second set.

Above all, remember that those little teeth are to serve Sonny through the formative period, which includes the years of his greatest growth and development, and that his growth will depend largely on his ability to properly maintain his food, which ability is exactly proportional to the soundness of his teeth.

Would That People Who Eat Fat Willam Armstrong Lenses, famous surgeon, would like to be dictator of Great Britain so he can reduce the size of hospitals by one-third. He would do it by teaching people how to eat. They stuff themselves now, he says; every mouthful is a mouthful of hospital.

Scotland Yard was on the job. Four months after the murder of the policeman they arrested the two men who were in the car when it was shot down, and the other in Liverpool. One week after the other murder, Scotland Yard arrested a man who afterwards confessed to being the wanted man.

The mills of Scotland Yard grind slow, but they grind sure.

A few weeks ago a man entered his apartment in old London and encountered an intruder. The latter shot him dead and ran out of the house, in amongst the teeming millions of human beings who comprise the metropolis of London.

He would do it by teaching people how to eat. They stuff themselves now, he says; every mouthful is a mouthful of hospital.

Special Cut Price for Mail Address: Cuticura Talcum Powder, 1000 Main Street, Portland, Maine, U.S.A. Cuticura Shaving Stick 25c.

TON-MILE ECONOMY

The Reason You Need
this CHEVROLET Truck!

The lowest Ton-Mile Cost in the world (that is, the lowest cost of transporting one ton for one mile, or its equivalent) is the one big reason why truck-users in all lines of business are choosing the Chevrolet Ton Truck. Added to this economy are amazing speed and dependability; exceptional performance, never before offered in a low-priced commercial car; ruggedness, strength and modern design undreamed-of in a truck so low in price.

Whether you need a truck for fast delivery in city streets or for steady transportation of ton-loads over all sorts of roads... you can find the right type of body available on the money-saving Chevrolet Ton-Truck chassis. Ask your Chevrolet dealer.

The G.M.A.C. General Motors' own deferred payment plan affords the most convenient and economical way of buying your Chevrolet on time.

About Town and Country

John F. Miller, eye sight specialist of 404 Underwood Block, Calgary, will be at the hotel in Oyen, on Saturday, April 21, for the purpose of correcting your and your children's eyes. Do not miss this opportunity.

B. H. Dial, auctioneer, will conduct a community auction sale in Oyen on Saturday, April 21. If you have anything to sell, bring it in.

Automobile owners are warned not to drive their cars without first obtaining their 1928 license plates.

Miss Ella Church, who has been spending the winter months in Colorado with her mother, recently returned to Oyen, and has resumed her duties as teacher at Benton School, Mrs. Church is visiting her son Jim at Bowden, Alta.

Mr. and Mrs. J. Long moved from First Avenue East to the Bishop property on Main Street last week, and Mr. and Mrs. C. Riel are making their home in the house vacated by Mr. and Mrs. Long.

Born—To Mr. and Mrs. Alex. Walker of Oyen, on Tuesday, April 17, a daughter.

Despite the handicap of being in very poor health, Franklin Van Horne, winner of Oyen district elimination contest, made an exceptionally good showing at the Southern and Central Alberta elimination contest in the Dominion and International Oratorical Contest, held in Calgary last Thursday. The contest was won by Arthur Cragg, a Calgary boy, but the people of this district are proud of Franklin for his very notable effort. The Northern Alberta contest was won by Miss Margaret Kinney of Edmonton.

Stuart A. Miller met with a painful though not serious accident last Saturday when he cut off a small piece of the index finger of his right hand. Immediately after the accident, which occurred while he was cutting string over the edge of a small sickle knife, he hurried off to the hospital to have his finger dressed, forgetting to take the piece along with him. A phone call to the store caused search to be made, and the missing portion rushed to him and attached to the injured digit, which now appears to be healing satisfactorily.

Under instructions from the Soldier Settlement Board, I will sell at public auction, at the farm of C. W. Halstead, on the west half of Section 3, Township 27, Range 5, (8 miles south and 3 miles west of Excel) on Wednesday, April 25, horses, harness, farm machinery etc. The sale will commence at 1 o'clock in the afternoon. See sale bills for list. B. H. Dial, auctioneer.

FOR SALE—Hay, browse and rye mixed. Will trade for cattle. Apply: C. F. Bamsard, Sunnyside.

PRINTING—All kinds of Commercial Printing neatly turned out by The Oyen News Job department.

LEGAL NOTICE

SURVEY NOTICE

Mineral Claims "Atherta", "Wonder", "St. Joe" and "Bear" situated in the Calgary Mining District and located in or about Section 10 and Section 30 half of Section 39 in Township 27, Range 3, West of the 4th Meridian. Take notice that a survey has been made of the above mineral claims under instructions from the Surveyor General, and that at the termination of sixty days from the date of this notice the said survey shall be accepted as defining absolutely the boundaries of the said claims, unless in the meantime it is protested as provided in Section 70 of the Quartz Mining Regulations of 1917.

Dated this 14th day of January 1928.
William Livingstone.
Att'y for Wm. A. Baehr.
William Livingstone,
per L. D. Kirkness, Atty.

School re-opened after the Easter holidays, last Monday, with members of the teaching staff all present.

Mr. H. McMahon is visiting his daughter Mrs. W. B. Dobbin.

The Misses Catherine Wright, Clophas Desmond and Maxine Sutherland, who spent the Easter holidays at their respective homes, returned to Calgary last Sunday, to resume their studies at Normal School.

Seating accommodation at the United Church was taxed to capacity last Sunday evening when service was devoted to receiving into the church over fifty new members, and the holding of Holy Communion. Services conducted by Rev. H. C. Woods, are drawing large congregations, and his activities in connection with the church will be a powerful influence in the campaign now on to raise funds to build a new church on the site adjoining the manse.

Group 1, of the Ladies Aid, held "school" at the home of Mrs. J. P. Kerr on Monday evening, when about 10 guests were present. The guests all attended dressed as youngsters, while "teacher" was becomingly attired in costume prevalent in the late forties—you know, leg-of-mutton sleeves, high laced boots, skirts almost touching the floor, bustle (7-8 in), no belt—and wrist watch suspended by a chain from a safety-pin over the heart, and worn in waist band. From all accounts in circulation "school" was an hilarious success and the group's building fund augmented by approximately ten dollars.

THE
DURANT

When You
DRIVE THE DURANT
"65"

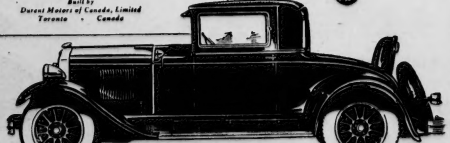

"... you will say, 'Here is a car that gives me quicker acceleration, more power, more speed and easier sustained driving than I ever thought could be had in any car at its price.'"

You will notice the quick, soft action of the Bendix 4-wheel brakes, the safety features of the full vision windshield and the little effort required to handle the Durant "65" in traffic.

Your passengers will be equally enthusiastic regarding the comfort of rear-seat riding and the quality of the two-tone upholstery and interior appointments.

Go to your nearest Durant dealer... drive the Durant "65"... take your friends along... and see if your impressions do not agree with the forecast of them!
